## ✎ Creole синтаксис

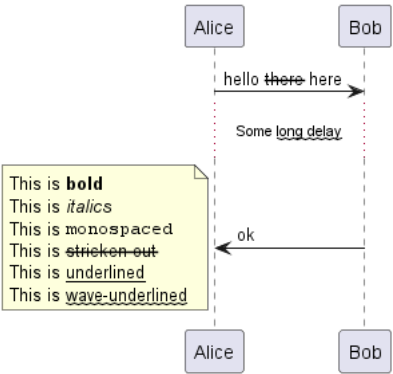

Creole - это облегчённый язык разметки, используемый в различных вики.

Чтобы иметь стандартизированный способ стилизации текста, в PlantUML интегрирован легковесный движок Creole и все диаграммы в PlantUML поддерживают этот синтаксис.

Также сохраняется совместимость с синтаксисом HTML.

### ✎ Emphasized text

```
@startuml
Alice -> Bob : hello --there-- here
... Some ~~long delay~~ ...
Bob -> Alice : ok
note left
  This is bold
  This is italics
  This is "monospaced"
  This is --stricken-out--
  This is underlined
  This is ~wave-underlined~
end note
@enduml
```

### ✎ Lists

You can use numbered and bulleted lists in node text, notes, etc.

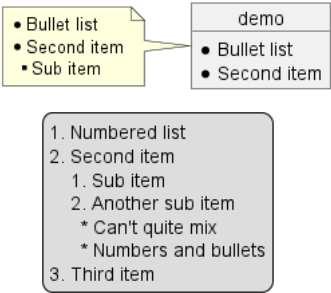

**FIXME** You cannot quite mix numbers and bullets in a list and its sublist.

последовательность прецедентов классов активности активности **теги** компонент состояний объ

```
object demo {
  * Bullet list
  * Second item
}
note left
  * Bullet list
  * Second item
  ** Sub item
end note

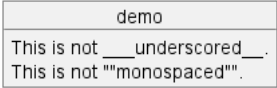

legend
  # Numbered list
  # Second item
  ## Sub item
  ## Another sub item
    * Can't quite mix
    * Numbers and bullets
  # Third item
end legend
@enduml
```

Escape character

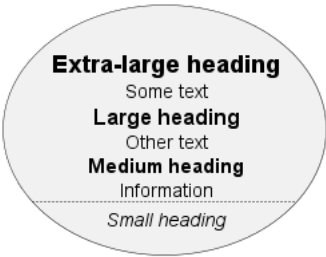

You can use the tilde ~ to escape special creole characters.

```
@startuml
object demo {
  This is not ~__underscored__.
  This is not ~'"monospaced"'".
}
@enduml
```

Headings

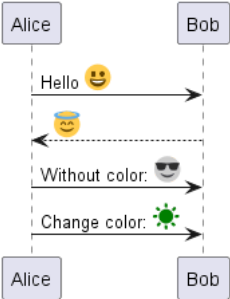

```
@startuml
usecase UC1 as "
= Extra-large heading
Some text
== Large heading
Other text
=== Medium heading
Information
....
==== Small heading"
@enduml
```

All emojis from Twemoji (see [EmojiTwo](#) on Github) are available using the following syntax:

```
@startuml
Alice -> Bob : Hello <:1f600:>
return <:innocent:>
Alice -> Bob : Without color: <#0:sunglasses:>
Alice -> Bob : Change color: <#green:sunny:>
@enduml
```

Use the [emoji cheat sheet](#) to select emoji.

You can also use the following PlantUML command to list available emoji:

```
@startuml
emoji <block>
@enduml
```

Over 580 emojis from the following [Unicode blocks](#) are available:

- Unicode block 26
- Unicode block 1F3
- Unicode block 1F4
- Unicode block 1F5
- Unicode block 1F6
- Unicode block 1F9

- Style equivalent (bet Creole and HTML)

Links

You can also [use URL and links](#).

Simple links are define using two square brackets (or three square brackets for field or method on class diagram).

Example:

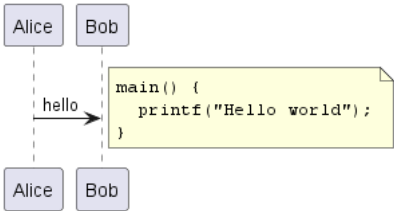

- [[<http://plantuml.com>]]
- [[<http://plantuml.com> This label is printed]]
- [[<http://plantuml.com>{Optional tooltip} This label is printed]]

URL can also be [authenticated](#).

Code

You can use `<code>` to display some programming code in your diagram (sorry, syntax highlighting is not yet supported).

```
@startuml
Alice -> Bob : hello
note right
<code>
main() {
    printf("Hello world");
}
</code>
end note
@enduml
```

This is especially useful to illustrate some PlantUML code and the resulting rendering:

This is ∞ long  
This is a &code icon

✎ Table

Create a table

It is possible to build table, with | separator.

📄

✎

```
@startuml
skinparam titleFontSize 14
title
  Example of simple table
  | = | table | = header |
  | a | table | row |
  | b | table | row |
end title
[*] --> State1
@enduml
```

Example of simple table

table	header
a	table row
b	table row

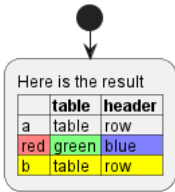

Add color on rows or cells

You can specify background colors of rows and cells:

- 📄

```
start
:Here is the result
|= |= table |= header |
| a | table | row |
|<#FF8080> red |<#80FF80> green |<#8080FF> blue |
<#yellow>| b | table | row |;
@enduml
```

Add color on border and text

You can also specify colors of text and borders.

```
@startuml
title
<#lightblue,<#red>|= Step |= Date |= Name |=
<#lightgreen>| 1.1 | TBD | plantuml news |<#N:
end title
@enduml
```

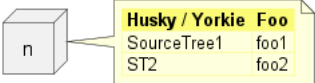

Step	Date	Name	Status	Link
1.1	TBD	plantuml news	Unknown	plantuml news

[Ref. [QA-7184](#)]

No border or same color as the background

You can also set the border color to the same color as the background.

```
@startuml
node n
note right of n
<#FBFB77,<#FBFB77>|= Husky / Yorkie |= Foo |
| SourceTree1 | foo1 |
| ST2 | foo2 |
end note
@enduml
```

[Ref. [QA-12448](#)]

Bold header or not

= as the first char of a cell indicates whether to make it bold (usually used for headers), or not.

```
note as deepCSS0
  |<#white> Husky / Yorkie |
  |<#gainsboro> SourceTree0 |
endnote

note as deepCSS1
  |= <#white> Husky / Yorkie |= Foo |
  |<#gainsboro><r> SourceTree1 | foo1 |
endnote

note as deepCSS2
  |= Husky / Yorkie |
  |<#gainsboro> SourceTree2 |
endnote

note as deepCSS3
  <#white>|= Husky / Yorkie |= Foo |
  |<#gainsboro> SourceTree1 | foo1 |
endnote
@enduml
```

[Ref: [QA-10923](#)]

Tree

You can use |\_ characters to build a tree.  
On common commands, like title:

@startuml  
skinparam titleFontSize 14  
title  
Example of Tree  
|\_ First line  
|\_ \*\*Bom (Model)\*\*  
|\_ prop1  
|\_ prop2  
|\_ prop3  
|\_ Last line  
end title  
[\*] --> State1  
@enduml

Example of Tree

First line

Bom (Model)

prop1

prop2

prop3

Last line

State1

On Class diagram.  
(Please note how we have to use an empty second compartment, else the parentheses in **(Model)** cause that text to be moved to a separate first compartment):

@startuml  
class Foo {  
\*\*Bar (Model)\*\*  
|\_ prop  
|\_ \*\*Bom (Model)\*\*  
|\_ prop2  
|\_ prop3  
|\_ prop3.1  
\_ prop4 :(
}  
@enduml

Foo

Bar (Model)

prop

Bom (Model)

prop2

prop3

prop3.1

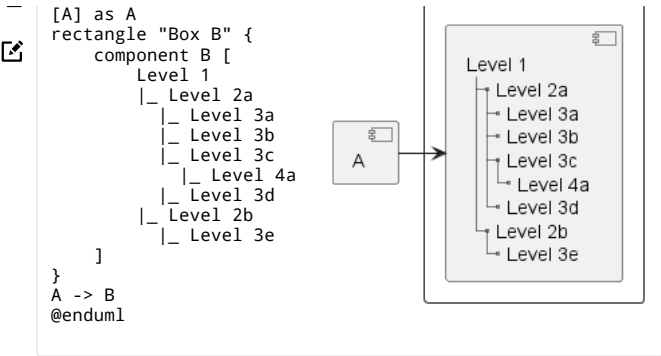

prop4 :(

### Special characters

It's possible to use any [unicode character](#), either directly or with syntax `&#XXXX;` or `<U+XXXX>` :

### Legacy HTML

You can mix Creole with the following HTML tags:

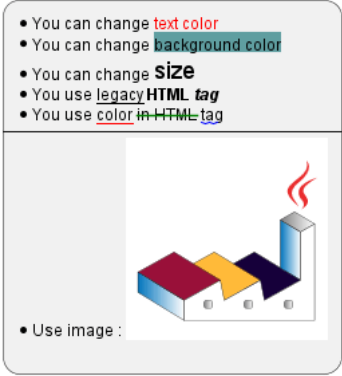

- `<b>` for bold text
- `<u>` or `<u:#####>` or `<u:[[color|colorName]]>` for underline
- `<i>` for italic
- `<s>` or `<s:#####>` or `<s:[[color|colorName]]>` for strike text
- `<w>` or `<w:#####>` or `<w:[[color|colorName]]>` for wave underline text
- `<plain>` for plain text
- `<color:#####>` or `<color:[[color|colorName]]>`
- `<back:#####>` or `<back:[[color|colorName]]>` for background color
- `<size:nn>` to change font size
- `<img:file>` : the file must be accessible by the filesystem
- `<img:http://plantuml.com/logo3.png>` : the URL must be available from the Internet

This is the "caffeine" molecule: $C_8H_{10}N_4O_2$
This is the Pythagorean theorem: $a^2 + b^2 = c^2$
This is the Pythagorean theorem: $a^2 + b^2 = c^2$

OpenIconic

OpenIconic is a very nice open-source icon set. Those icons are integrated in the creole parser, so you can use them out-of-the-box.

Use the following syntax: `<&ICON_NAME>` .

```
@startuml
title: <size:20><&heart>Use of OpenIconic<&heart>
class Wifi
note left
    Click on <&wifi>
end note
@enduml
```

## ♥Use of OpenIconic♥

Click on  Wi-Fi

The complete list is available with the following special command:

```
@startuml
listopeniconic
@enduml
```

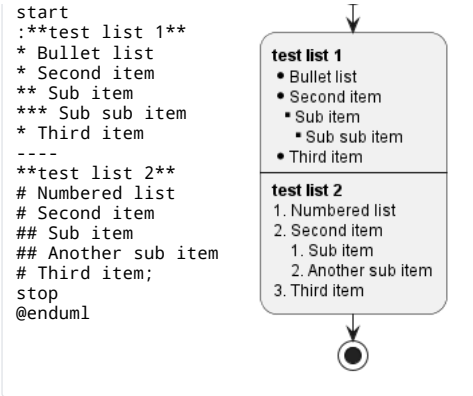

[illegible]
